

Computational Fluid Dynamics Group, IIT Hyderabad

Prof. Raja Banerjee
Professor

Areas of research:
 • Spray Dynamics
 • Turbulent Combustion
 • Bulk Interfacial Flows

Prof. Venkata Subbaiah
Professor

Areas of research:
 • Hypersonic Flows
 • Cooling of Electronic Devices
 • Computational Heat transfer

Dr. Nishanth Dongari
Associate Professor

Areas of research:
 • Rarefied Gas Dynamics
 • Molecular Dynamics
 • Microfluidics

Dr. Harish Nagaraj Dixit
Associate Professor

Areas of research:
 • Interfacial Fluid Mechanic
 • Electrohydrodynamics
 • Flow in Biological Systems

Dr. Lakshmana Dora Chandrala
Assistant Professor

Areas of research:
 • Supersonic Flows
 • Multiphase Flows
 • Blast Wave Dynamics

Dr. Niranjan Shrinivas Ghaisas
Assistant Professor

Areas of research:
 • Wind Energy
 • Turbulent Flows
 • Multi-Material Simulation

Dr. Sachidananda Behera
Assistant Professor

Areas of research:
 • Turbulence Modelling
 • Flow Control
 • Two-Phase Flows

Dr. S K Karthick
Assistant Professor

Areas of research:
 • Hypersonic
 • Aerothermodynamics
 • Fluidic/Energy Conversion Devices
 • Jet Aeroacoustics

Dr. Ankush Kumar Jaiswal
Assistant Professor

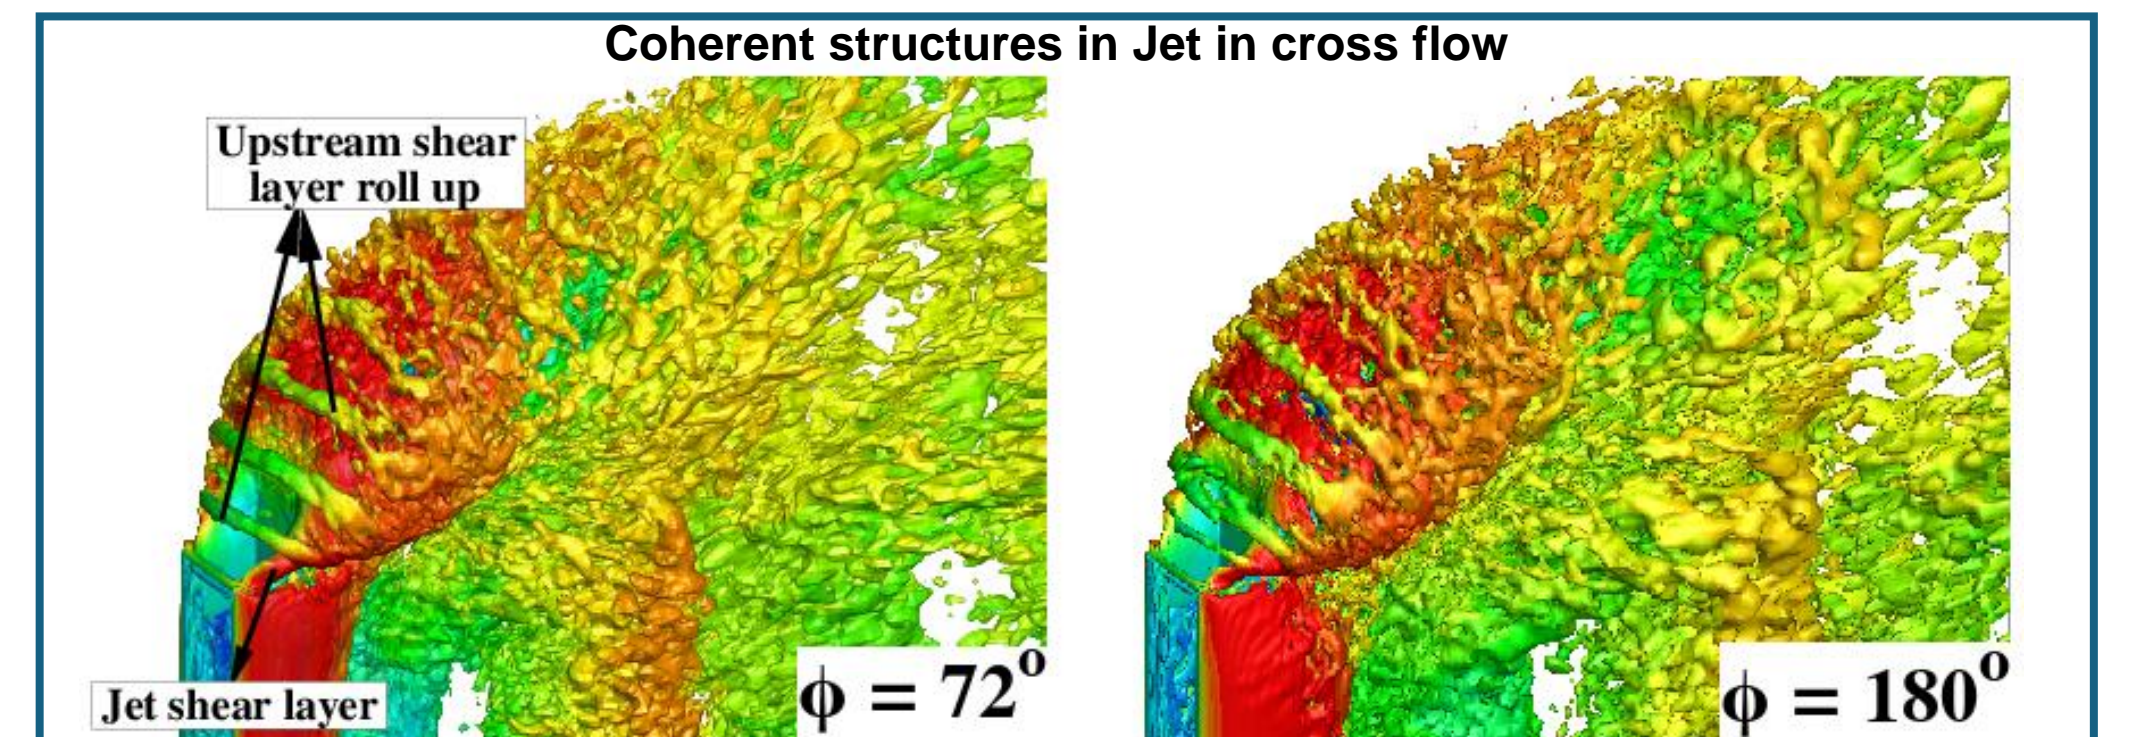

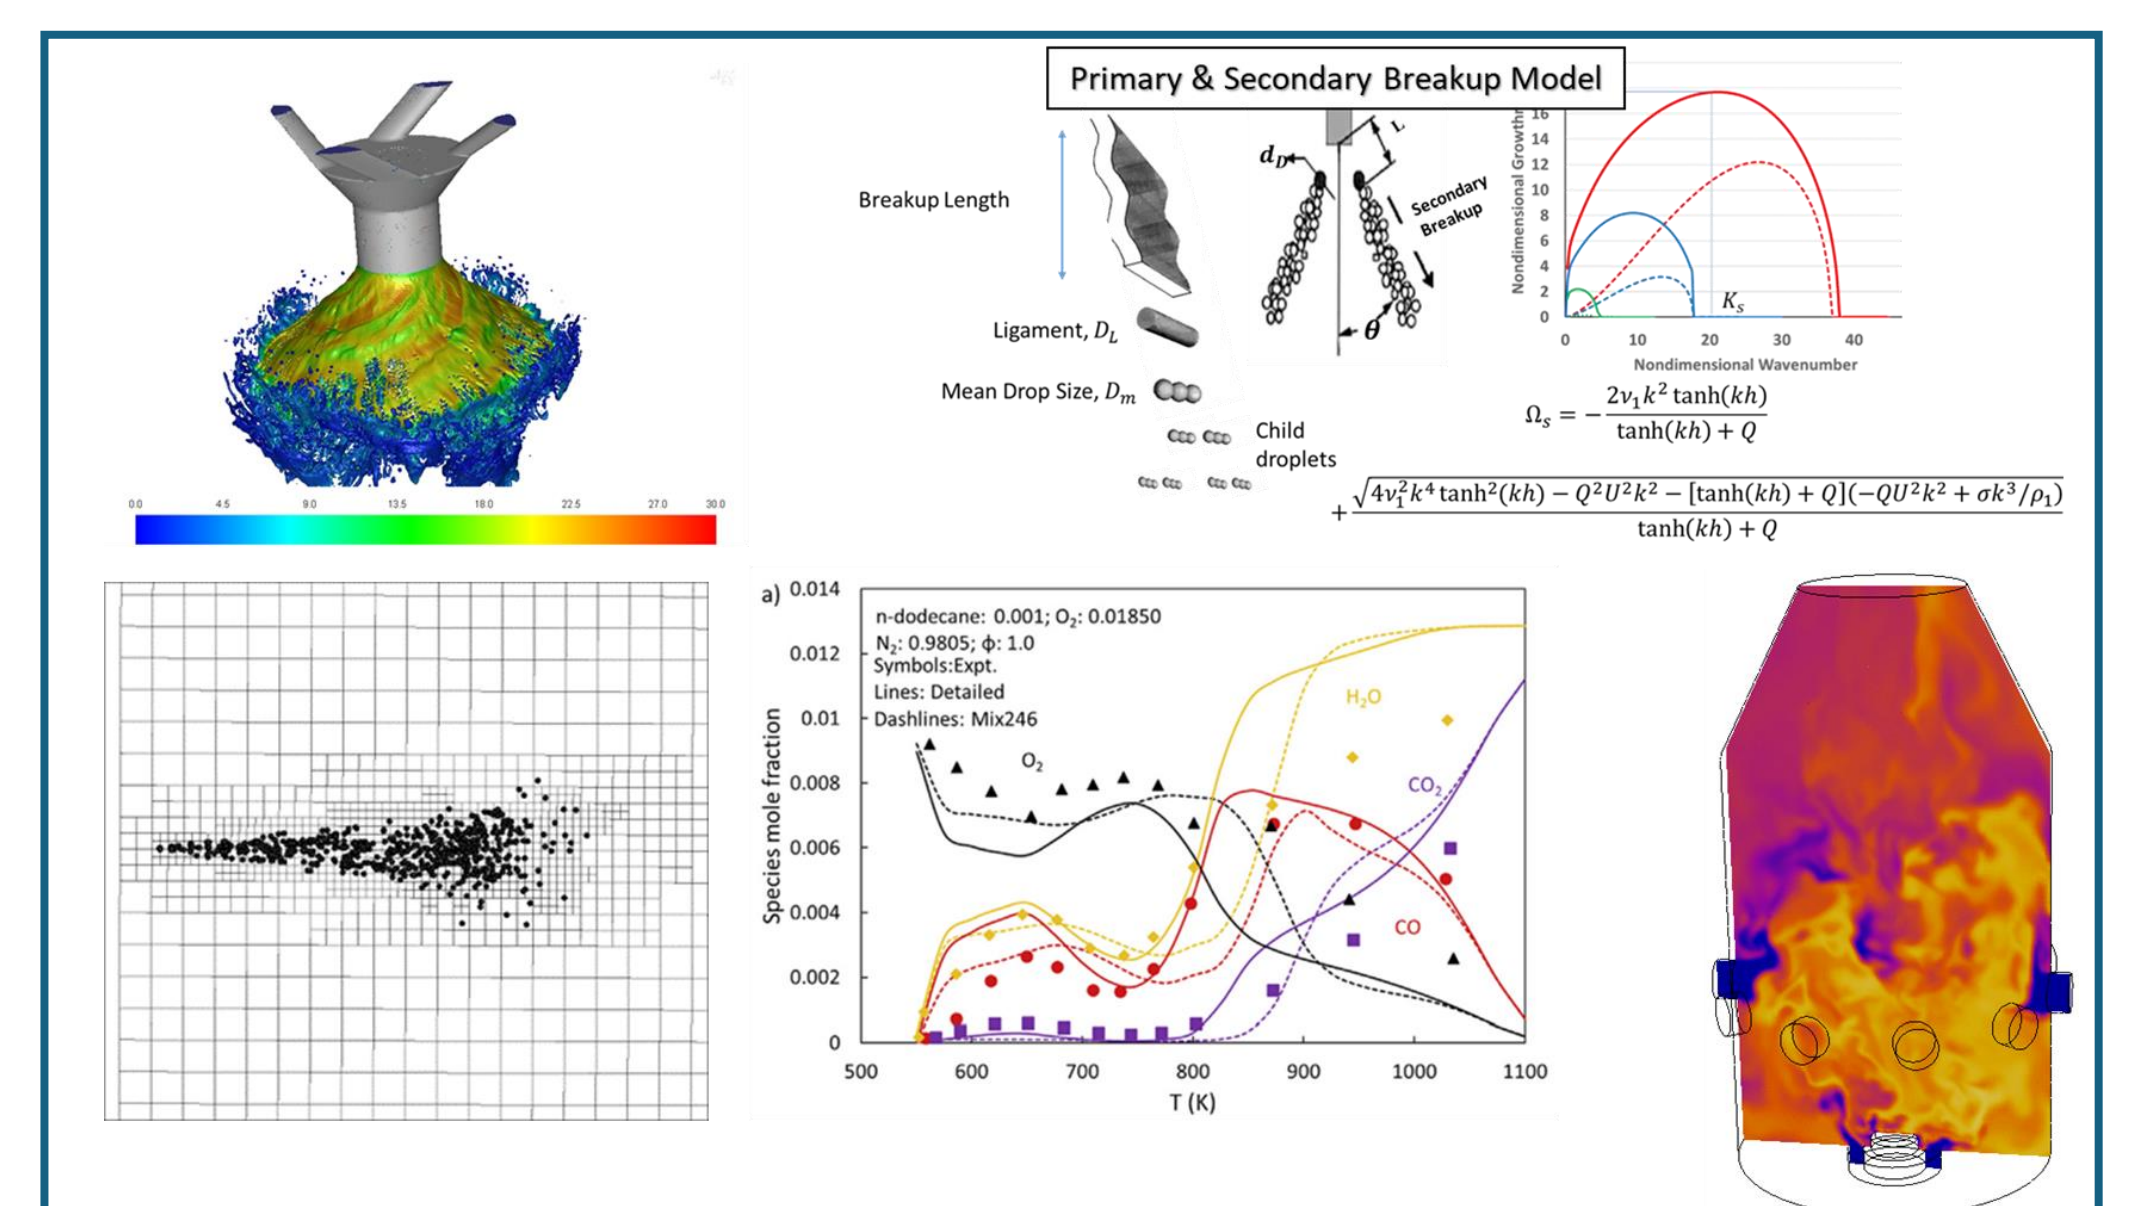

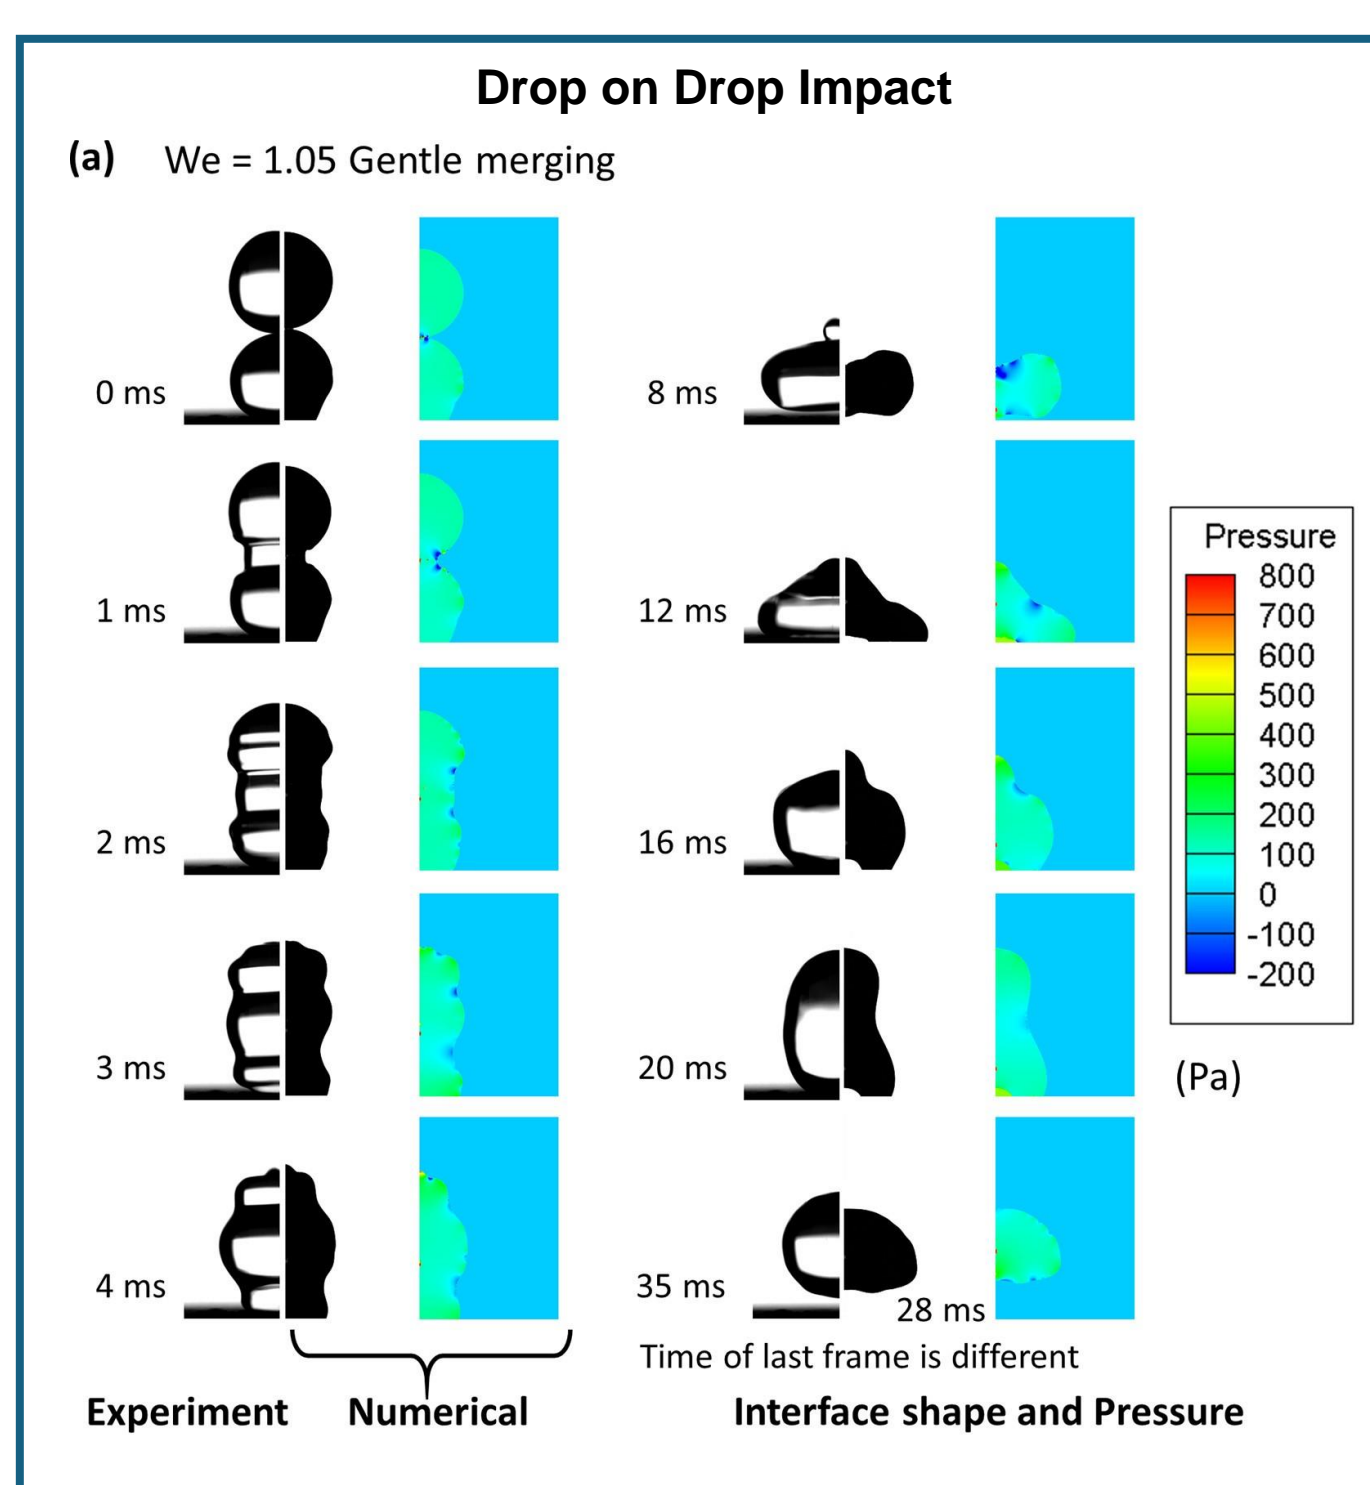

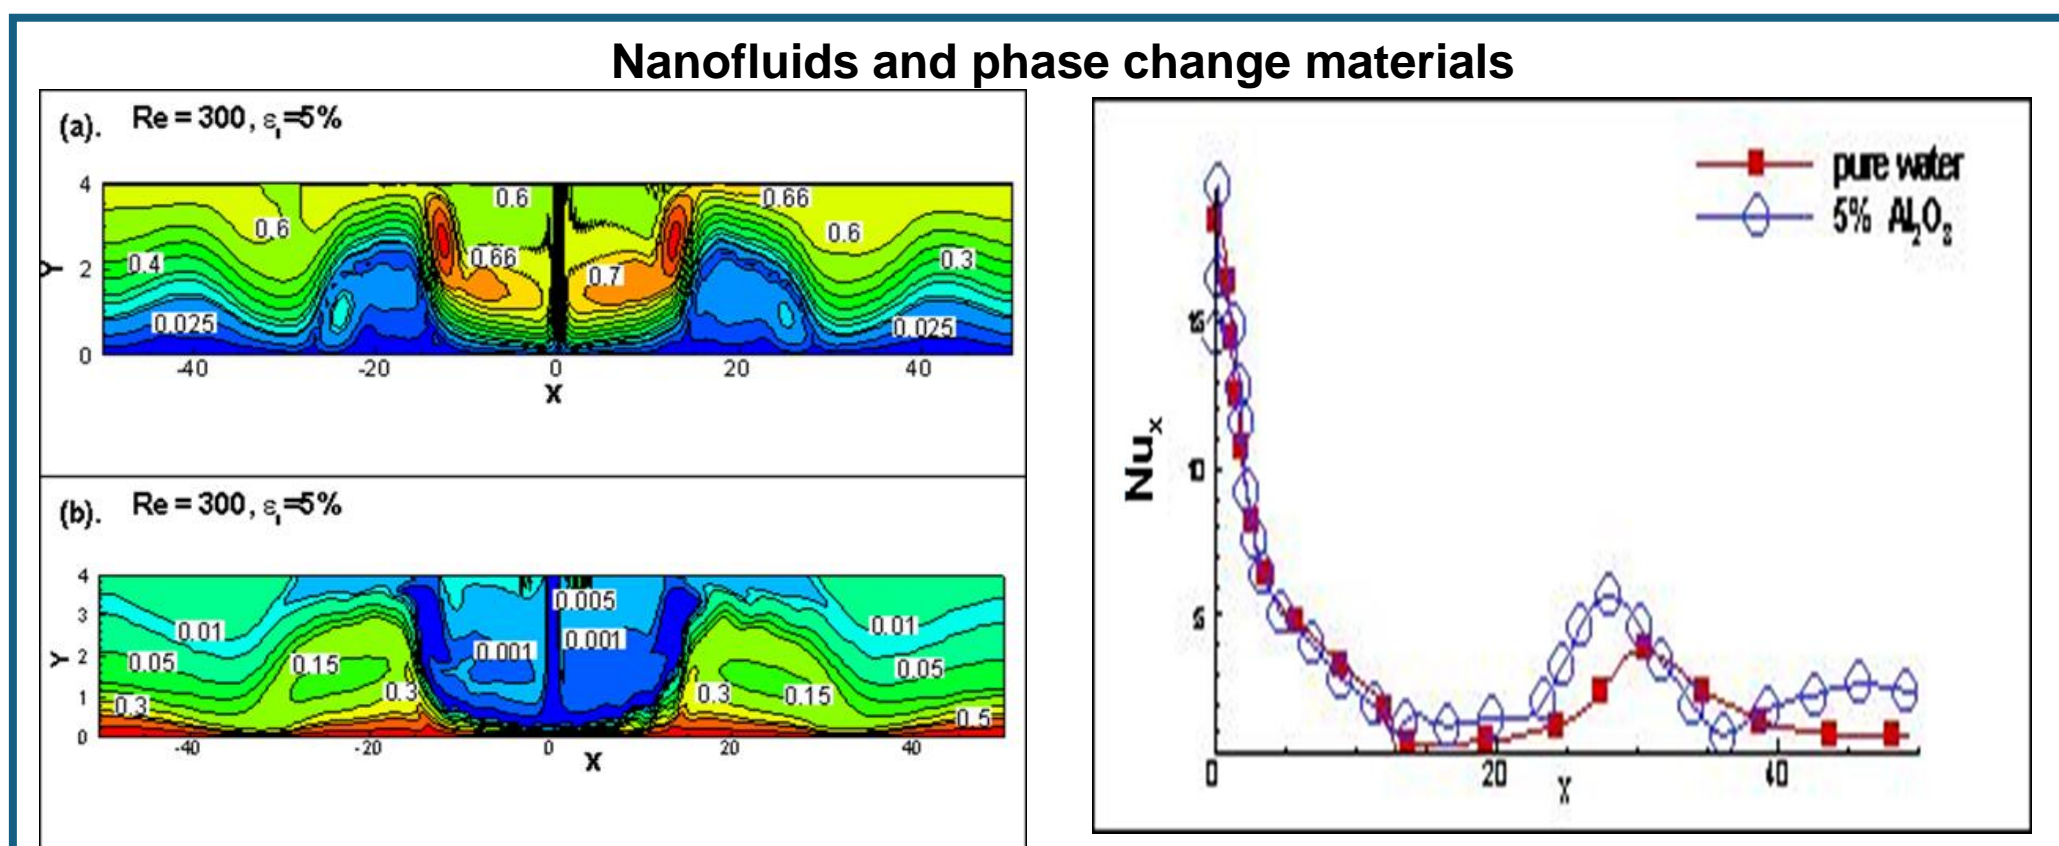

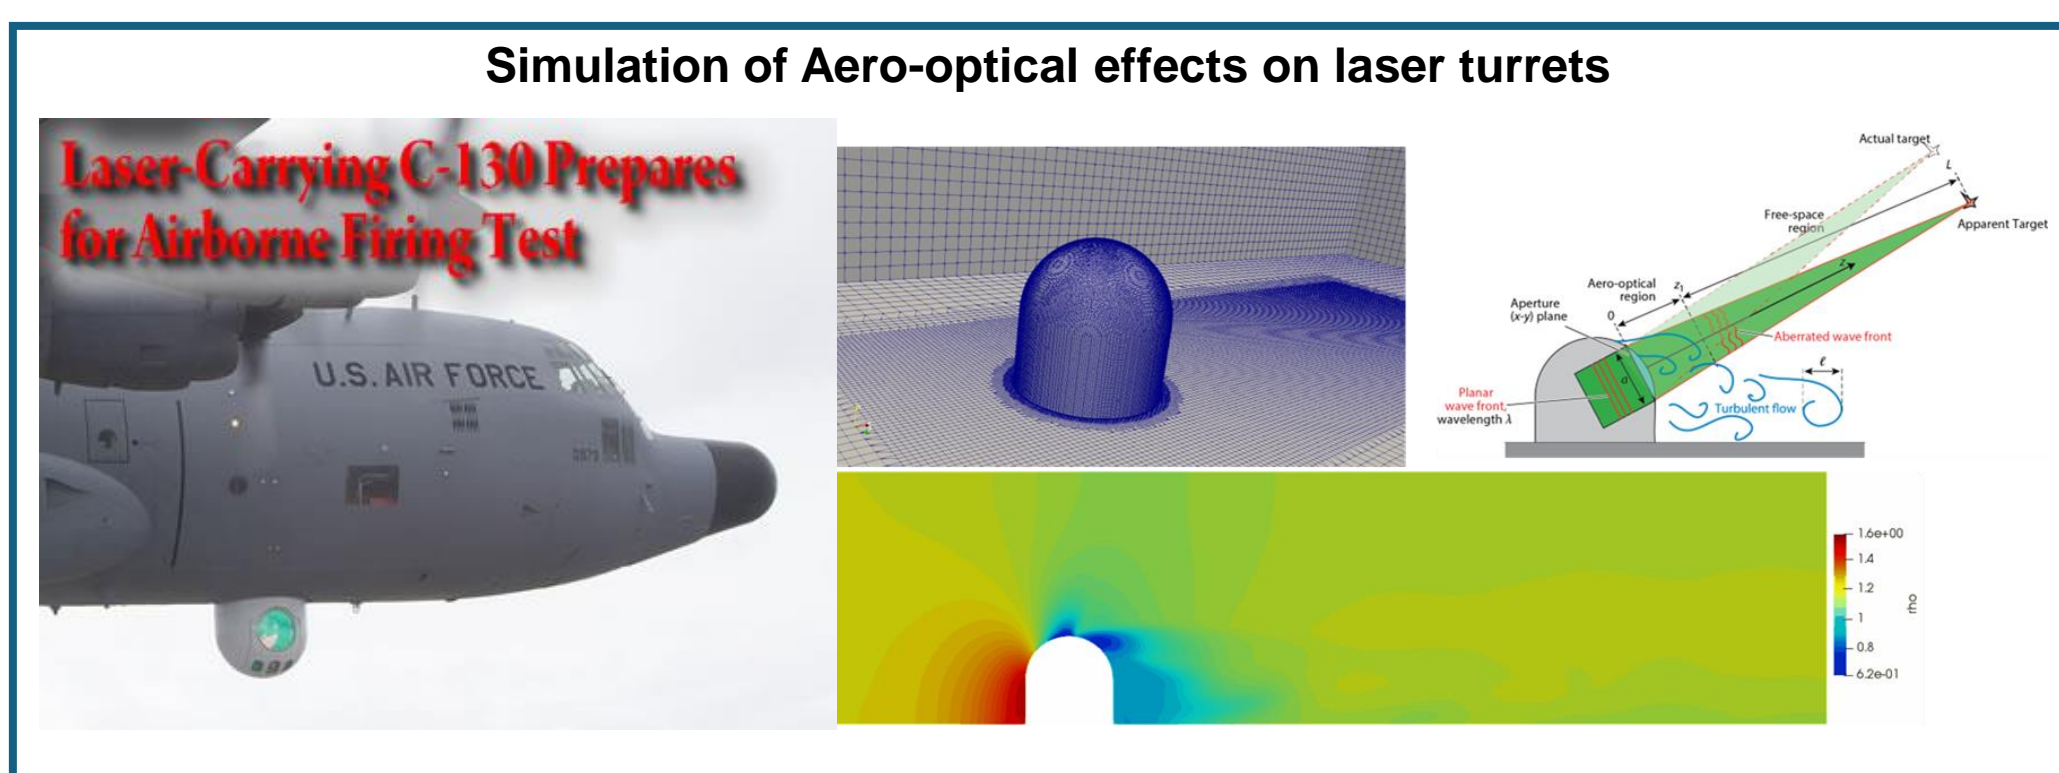

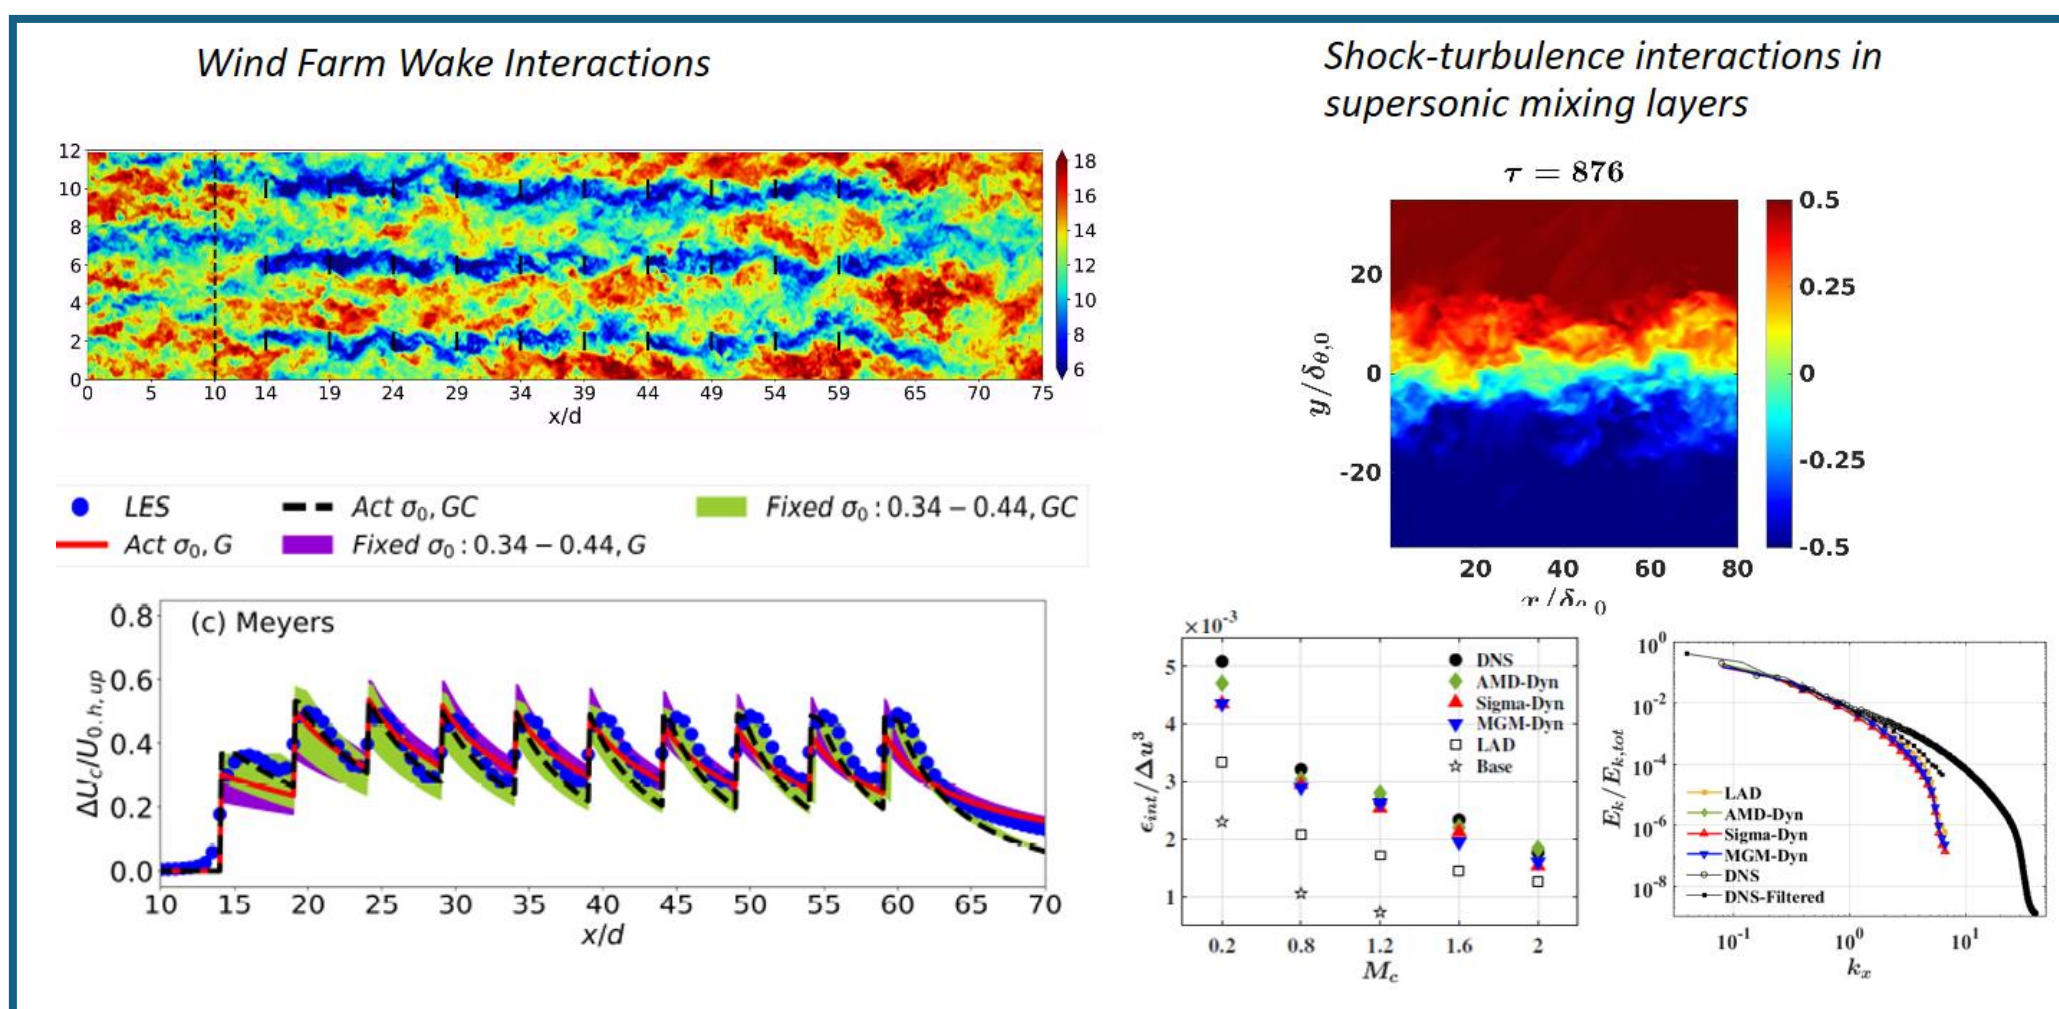

Areas of research:
 • Thermal Comfort
 • Water Harvesting
 • Multiphase Systems

Projects

- Development and Application of a Multiscale Dual Grid Eulerian-Lagrangian Solver to Study Atomization of a Simplex Atomizer
- Development of a Compression Ignition Engine working on Ammonia/Natural Gas & Biodiesel Blends
- Development of an on-board spray controller model for UAVs using AI for precision agriculture
- Development of a Highly Scalable CPU-GPU Hybrid Architecture Based Parallel Two Phase Unstructured CFD Solver
- Boundary layer and wind farm flows over heterogeneous terrain: Design-oriented model development using large-eddy simulations
- Investigation of end-wall acoustic loading on a deep duct present ahead of a recirculation bubble for a wide range of Mach numbers
- Development of an unsteady wind tunnel for simulating flight-relevant flow conditions for a minor or nano UAV
- Stability of a three-dimensional vortex with radial density stratification
- On the role of inertia and surfactants in moving contact line flows
- Connecting operating variables, cone/jet features and mesh properties in electrospinning: using experiments and modelling to bridge theory and applications,
- Study of cavitation bubble induced vortex rings and bubble behaviour between curved boundaries
- Simulation of aero-optical effects

Cumulative Funding: 15.15 Crs
